**Subject:** Extend API (e.g., POST /servers) Implementation, support Images on Plankton

### Description

Extend implementation of POST /servers in API, support creation of VMs based on IDs coming from Plankton (#989).  
Pass a distinct type for Pithos-based images to snf-image, via backend\_id.

This should be done **without** removing support for Images provided by the Image model.

The API implementation should continue to support Image IDs coming over ORM from the Image model in the DB.
