In kamaki.clients.pithos.PithosClient.upload\_object add the if\_not\_exist option. If true, the remote object should not exist, otherwise the upload will fail

This is implemented with the if\_etag\_not\_match param of kamaki.clients.pithos.rest\_api.PithosRestClient.object\_put which affects the if-none-match header

I will be needing an etag-if-match option.

It's done (just not mentioned in the commend - it is now, though !).
