reconcile-resources: check that user exists in QH

Do not consider 0 usage for users and resources that are not included in Quotaholder resources list, since Quotaholder returns zero usage for all users and all resources. If a user/resource does not belong to QH respond then it can not be an Astakos user.

Revision ccfb77b - 04/30/2013 05:05 pm - Christos Stavrakakis

Varous fixes to cyclades-usage-verify command

Extend 'cyclades-usage-verify' management command to cover the usage of 'cyclades-reset-usage' and remove the second one. The new command reconciles resources(usage) by detecting inconsistencies between the usage of resources in Astakos and Cyclades DB and fixing them by issuing a commission with the difference of the usage in DB and Astakos. If there is a pending commission for a resource, reconciliation for this resource is skipped. Refs #3627

Also, make this command do not consider only users that exist in Cyclades DB, but also users that exist in Quotaholder. For such users, it is assumed that they have zero usage for all Cyclades resources.
