Synnefo - Bug # 3631

Status:	Closed	**Priority:**	Medium
Author:	Konstantinos Tompoulidis	**Category:**	Astakos
Created:	04/18/2013	**Assignee:**	
Updated:	06/19/2013	**Due date:**	
Subject:	User reference inconsistency		
Description			

When using "snf-manage user-update" the reference to the user is by ID and not UUID.

Although the reference is not of administrative importance, the consistency of the reference is.
Instead of using UUID in some commands and ID in others, it would be best to keep only one type of reference.

At the moment this has been observed for users but this should be the case for everything else (e.g VMs, Projects, ...).
If this consistency could be kept between ganeti and synnefo (for VMs and networks) it would be even better.

commit:9235953748716709dbd8879788c8356e0d91ab4c

enables lookup user using also the UUID

This option will be available with the next release.
