Configurable service URLs via the otherProperties JS mechanism

I have implemented the following:

- Key STORAGE\_API\_URL represents the Pithos API URL and it is search for in otherProperties.
- Key USER\_CATALOGS\_API\_URL represents the /user\_catalogs API URL and it is searched for in otherProperties.
- If STORAGE\_API\_URL is found then we use that as the API URL otherwise we fall back to the previous mechanism.
- If USER\_CATALOGS\_API\_URL is found then we use that as the /user\_catalogs API URL otherwise we fall back to the previous mechanism (which is really ad-hoc anyway)
