

./kamaki - Feature # 4340

Status:	Resolved	Priority:	Medium
Author:	Stavros Sachtouris	Category:	kamaki
Created:	09/20/2013	Assignee:	Stavros Sachtouris
Updated:	10/30/2013	Due date:	09/27/2013
Subject:	Reorganize astakosclient-originated command namespaces		
Description	<p>Currently:</p> <p>kamaki astakos -h feedback: Send feedback to astakos server quotas: Get user (or service) quotas commission: Manage commissions (special privileges required) services: Astakos operations filtered by services endpoints: Get endpoints service endpoints resources: List user resources</p> <p>user: info: Authenticate a user uuid: Get uuid(s) from username(s) name: Get username(s) from uuid(s) services: Astakos operations filtered by services username: Get service username(s) from uuid(s) Get service uuid(s) from username(s) List available services Get user (or service) quotas endpoints: Get endpoints service endpoints resources: List user resources</p> <p>kamaki projects -h <project commands> ...</p> <p>While projects namespace is OK, the astakos namespace is confusing for most users. Ideally, command namespaces should be semantically content and self-describing, so that users would rarely need to user help and documantion.</p> <p>The prevalent idea is to rename "astakos" to "user". There is a "user" namespace in kamaki that manages cached user information. This could be moved to "user session".</p> <p>This is the proposed status of the astakos-related commands at 0.11:</p> <p>kamaki user -h info: Authenticate a user and get info uuid2name: Get uuid(s) from username(s) name2uuid: Get username(s) from uuid(s) quotas: Get user (or service) quotas session: Manage kamaki session user setting list: list all cached authenticated users add: authenticate and a new user (by token) and add to cache pick: Set session user from the list of cached authenticated users whoami: Show current session user</p>		

kamaki admin -h
commission: Manage commissions (special privileges required)
services: Astakos operations filtered by services
endpoints: Get service endpoints
resources: List user resources
service: Astakos operations filtered by services
uuid2name: Get service username(s) from uuid(s)
name2uuid: Get service uuid(s) from username(s)
list: List available services
quotas: Get user (or service) quotas
endpoints: Get endpoints service endpoints
resources: List user resources
feedback: Send feedback to astakos server

kamaki projects -h
<project commands> ...
