

./kamaki - Bug # 4992

Status:	Resolved	Priority:	Medium
Author:	Dionysis Grigoropoulos	Category:	kamaki
Created:	01/27/2014	Assignee:	Stavros Sachtouris
Updated:	01/28/2014	Due date:	01/28/2014
Subject:	Multiple ways to create a container		
Description			
<p>At the moment, there are three ways to create a container:</p> <ul style="list-style-type: none">1) kamaki container create contrainer_name2) kamaki file mkdir /container_name3) kamaki file create /container_name <p>That is to be expected, since all three operations perform a PUT on the same resource. A check should be in place, to prevent this from happening and only allowing `container create` to create a container.</p>
