

## Synnefo - Bug # 867

<b>Status:</b>	Closed	<b>Priority:</b>	High
<b>Author:</b>	Leonidas Poulopoulos	<b>Category:</b>	deployment
<b>Created:</b>	07/19/2011	<b>Assignee:</b>	Giorgos Gousios
<b>Updated:</b>	07/19/2011	<b>Due date:</b>	
<b>Subject:</b>	User with 0 invitations receives strange error messages when inviting new users		
<b>Description</b>			
<p>When a user has no invitations and proceeds to inviting someone, then an informational message shows up indicating that: "Invitation to XXXX YYYY &lt;<a href="mailto:invitees_mail@mail.com">invitees_mail@mail.com</a>&gt; not sent. Reason: User with email <a href="mailto:gousiosg@aueb.gr">gousiosg@aueb.gr</a> already invited". What is strange is that the error message states that "User with email <a href="mailto:gousiosg@aueb.gr">gousiosg@aueb.gr</a> already invited". This message comes up regardless of the user that is to be invited.</p> <p>When the user with 0 invitations, tries to invite the same person twice, then (having received the pre-mentioned message on the first attempt) the error message changes to "Invitation to XXXX YYYY &lt;<a href="mailto:invitees_mail@mail.com">invitees_mail@mail.com</a>&gt; not sent. Reason: User invitation limit (0) exhausted"</p>			

### Associated revisions

#### Revision d53bbf68 - 07/19/2011 07:16 pm - Giorgos Gousios

Be a bit more careful when initializing exceptions

The problem seems to be that the code incorrectly used a class variable which was initialized once and exception messages were appended to it by both TooManyInvitations and AlreadyInvited exception types, hence the fuzzy error reporting.

Fixed by using instance variables.
